

Benefits of On-site and Turnkey Dialysis

- Provide all, biomedical supplies, quality management and expert clinical teams to required to administer treatment -- all within your facility.
- Comprehensive dialysis program is customized to accommodate your space and specificity of census, workflow, and security requirements.
- Access to a nationwide network of resources from staffing to supply chain so you can expect a cost-effective and sustainable dialysis program.
- Mitigation of the dangerous and costly enterprise of transporting prisoners offsite to local clinics or hospitals.

Transporting inmates offsite costs correctional facilities thousands of dollars per treatment vs. hundreds of dollars for on-site dialysis.

History

Rendevor Dialysis was born to thrive in difficult clinical environments. Founded by a pioneer in bringing on-site dialysis solutions to the correctional setting, we are still driven by that same adaptive, problem-solving spirit.

In 1994, dialysis nurse, Donna Combs-Williamson, recognized the urgent need to offer on-site care to patients within the correctional system. This efficient and effective mode of dialysis treatment swiftly earned the trust of the Department of Corrections, Bureaus of Prisons, and county jails as well as a majority of managed health companies nationwide. **Today, Rendevor Dialysis is the largest provider of correctional dialysis in the United States.**

Retention rate of our Correctional partners

The Rendevor Dialysis Partnership: Our Promise.

Our clinical teams have encountered – and can anticipate – every challenge and idiosyncrasy of the corrections setting, e.g. understanding complex security and risks, scheduling, custody situations, segregated patients, corrections-specific operating and safety protocols, and communications and technological challenges.

Clinical Excellence

- Patient-first approach
- Highly trained clinical teams to customize your turnkey dialysis program and administer treatment
- Staffing: RNs, CCHTs, Biomedical Technicians, Managers/Administrators, Nephrologists, Medical Directors (plus other care providers such as Social Workers and Registered Dieticians when necessary)
- Clinical Quality Program to evaluate patient outcomes and meet community benchmarks
- Transparency, accountability, and clear communications to ensure best practices and overcome any operating challenge quickly and collaboratively
- Policy and procedural compliance with ACA, NCCHA, CMS, AAMI, and the National Kidney Foundation's K/DOQI guidelines
- Network of Nephrologists/Medical Directors to oversee your program, make rounds, write orders etc. for patients in our care

Technical Expertise

- Best equipment for the program – Dialysis machines, Dialysis chairs, RO systems
- Competitive equipment pricing enabled through our national scale
- Timely and prioritized response
- Routine repair and maintenance as well as emergency response
- Nationwide network of biomedical professionals
- Water treatment and quality assurance including routine cleanings and disinfections

Physical Plant Design Consultation

- New unit design/Buildout consultation
- Workflow optimization

Nationwide Supply Chain

- Dialysis medications at attractive contracted rates
- Long-term contracts with established vendors for reliable, cost-effective, and consistent provision
- Handling of supply recalls, backorders, and unavailability

Savings and Stewardship

- Reliable and consistent dialysis services help you project accurate budgets and performance metrics.
- The most value-driven dialysis programs in the industry. Our economies of scale and experience-driven operating efficiencies allow us to build and sustain the highest quality programs at the best value to our partners.
- Our nationwide network of biomedical technicians ensures equipment maintenance, repairs, and supplies are always prompt, minimizing downtime and ensuring patient safety.
- We resolve issues before they escalate to unnecessary and costly hospitalizations and/or complex treatment requirements through our health education, prevention, and early recognition protocols.

The Rendevor Dialysis Partnership: Our Proven Process.

Discovery (30 Days approx.)

- Identification of client needs
- Acuity level assessment
- Census projections
- Treatment delivery assessment
- Physical site assessment

Determine Scope of Service (Timeline varies)

- Pricing Structure
- Statement of Work (SOW)
- Create milestones/timeline
- Contract terms negotiation and dual execution

Implementation (60-90 Days)

- Identify implementation teams
- Weekly implementation call
- Staff recruitment
- Equipment and Supply procurement
- Policies and procedures customized
- Partner training
- Test infrastructure
- Establish Quality reporting requirements
- Equipment fully functional and optimized

Program Sustainability & Consultancy (Ongoing)

- Clinical quality oversight (P&P, QAPI compliance, mock audits)
- Consistent communication with client including performance reports
- Proactive consultation (dialysis unit plan, staffing, etc)
- Staffing filled and trained, including audit requirements.
- Ongoing staff recruitment, training, and compliance oversight
- Provide Biomedical services (equipment maintenance and repair)
- Oversee and manage laboratory needs
